

ABSTRACT

Spherical capsule having a liquid core and a seamless solid shell surrounding the core, in which: the diameter of the capsule is in the range of 4 - 8 mm; the thickness of the shell is in the range of 20 - 200 μm ; the shell thickness to capsule diameter ratio is in the range of 0.004 - 0.04; the shell contains 70 - 90 % (m/m) gelatin and 10 - 30 % (m/m) plasticizer, based on the solids content of the shell; and the core has a flavoring content in the range of 1 - 100 % (m/m), based on the total mass of the core.
